Our Groomers scissor range is carefully curated and tailored to meet all of your grooming needs.

Whether you are a pet owner wanting to maintain your pup’s groom at home, a student groomer in training, or an experienced professional, we have a tool to suit you.

Our expert care advice is easy to follow and will support long lasting scissor life, helping to achieve beautiful grooms.

**Tensioning your scissors**
You will need to check the tension of your scissors upon receiving them, and adjust accordingly.

1. To test the tension, hold your scissors by the thumb ring with your left hand, with the scissor facing upright in the air at 12 o’clock.

2. With your right hand, take the finger ring and open the blades so they are open 35-45 degrees. Now let go of the ring in your right hand so the scissor almost closes by itself. When the blades come to a stop, there should be a gap between the two tips of approx. 1/4”. Anything more or less means your scissors require tensioning.

3. To tighten your scissors, marginally move the tension screw or tension key (depending on your scissor model) clockwise.

4. To loosen your scissors, marginally move the tension screw or key anti-clockwise.

5. You may need to move the screw a handful of times if the tension on your scissors is really off. Test and check the tension after each adjustment.

**Cleaning your scissors**
Ensure scissors are wiped down with a chamois cloth after each use. If your scissors are suitable for use with a barbicide solution, then use one to clean them. If the blades are covered in dirt, moisture, hair or chemicals, this can lead to corrosion, nicks or damage to the blade, so regular cleaning is essential. Do not use anything other than a barbicide solution or scissor oil on your scissors. You should also safely store your scissors closed and within a protective case to avoid unnecessary damage.

**Oiling your scissors**
It is important to oil your scissors at the end of each day to keep them well lubricated and feeling like new. Start off with clean and dry scissors. Open them and apply a small amount of scissors oil to the opening and around the adjustment screw. We recommend two small dots of oil at the end of each day. Work the oil down the inside of each blade, then wipe off any excess.

**Sharpening your scissors**
It is important to have your scissors professionally sharpened every 3-6 months, or as required, to achieve the best groom. How often you have your scissors sharpened will depend on how often they are being used, and the type of coat you are cutting.

**Alignment**
All scissors come aligned. However, with frequent use, they may require occasional re-aligning. If your scissors start to catch when they close and aren’t cutting evenly, this is a sign that they need to be aligned by a professional scissors sharpener. Do not attempt to do this at home as you risk permanently damaging, or even breaking, your scissors.
Frequently Asked Questions

1. Why aren’t my scissors cutting evenly?
The blades either need to be tensioned, aligned or sharpened. For re-aligning and sharpening, you will need to have this done professionally. Your scissors should be professionally sharpened every 3-6 months, or as required, to achieve the best groom. How often you have your scissors sharpened will depend on how often they are being used, and the type of coat you are cutting.

2. Are your scissors set up and ready to be used at the time of purchasing?
No, our scissors are set up to a general set up. Each user will have their own individual way of setting up their scissors blades, and this should be done before your first use.

3. Why do my scissors keep catching on the blades when I cut?
The blades need to be adjusted to be aligned.
